Emergency Preparedness Plan

Lakeside Research Reactor · 2019 draft · Superseded pending revision

1. Scope

This plan describes how the facility prepares for, responds to, and recovers from emergencies affecting the reactor building and its immediate surroundings.

2. Drills and exercises

A full-scale emergency exercise involving off-site responders is held every two years. Building evacuation drills are held at least twice a year, one of which is unannounced.

Each drill is followed by a debrief, and corrective actions are tracked to completion by the emergency coordinator.

3. Roles

The emergency coordinator directs the on-site response. The duty health physicist advises on radiological conditions. The facility manager liaises with off-site authorities.

4. Review

This plan is reviewed every three years, or sooner after an exercise identifies a significant weakness.
